

BRD- Retail Sales & Customer Order Management System

Project Name

Retail Sales & Customer Order Management System

Document Information

Field	Details
Project Name	Retail Sales & Customer Order Management System
Document Type	Business Requirements Document (BRD)
Version	1.0
Prepared By	Ishi Sharma
Document Status	Draft
Methodology	Agile Scrum

Version History

Version	Date	Author	Description
1.0	June 2026	Ishi Sharma	Initial BRD Creation

Executive Summary

The Retail Sales & Customer Order Management System is designed to streamline retail store sales operations by providing an integrated Point of Sale (POS) solution. The system enables store associates to manage customer purchases efficiently through customer identification, product selection, basket management, discount processing, loyalty voucher redemption, staff discount validation, payment processing, and transaction completion.

The solution aims to improve checkout efficiency, enhance customer experience, reduce manual effort, and ensure accurate transaction processing across retail stores.

The system will support multiple customer types including registered customers, newly registered customers, and guest customers. It will also support various payment methods such as card payments, cash payments, gift cards, credit notes, and other tender types.

The application will integrate with customer, loyalty, payment, discount, and sales services through APIs to provide a seamless checkout experience.

Business Objectives

ID	Objective
BO-001	Reduce checkout processing time
BO-002	Improve customer shopping experience
BO-003	Enable accurate sales transaction processing
BO-004	Support loyalty and promotional programs
BO-005	Support multiple payment methods
BO-006	Improve transaction recovery capabilities
BO-007	Increase operational efficiency
BO-008	Ensure transaction traceability and auditability

Problem Statement

The existing retail sales process involves multiple disconnected systems and manual validations, resulting in longer checkout times, inconsistent discount application, payment processing delays, and poor transaction recovery capabilities.

A unified POS solution is required to streamline the sales process, improve customer satisfaction, reduce operational complexity, and provide a consistent checkout experience across retail stores.

Project Scope

In Scope

- Transaction Recovery
 - User Authentication
 - Store Readiness Validation
 - Customer Search
 - Customer Registration
 - Guest Customer Checkout
 - Product Search
 - Barcode Scanning
 - Shopping Basket Management
 - Discount Application
 - Loyalty Voucher Redemption
 - Staff Discount Processing
 - Gift Card Validation
 - Payment Processing
 - Gift Receipt Generation
 - Sale Processing
 - Customer Order Creation
 - Sale Confirmation
-

Out of Scope

- Inventory Procurement
 - Supplier Management
 - Warehouse Operations
 - Employee Payroll
 - Product Master Management
 - Financial Reporting
-

Stakeholders

Stakeholder	Responsibility
Store Associate / Cashier	Process customer transactions
Store Manager	Operational oversight
Customer	Purchase products
Product Owner	Define business requirements
Business Analyst	Requirement gathering and documentation
Development Team	Solution development
QA Team	Testing and validation
Support Team	Post-production support

Assumptions

ID	Assumption
A-001	Users have valid login credentials
A-002	Payment gateways are available
A-003	Customer and product data are maintained in upstream systems
A-004	Loyalty and discount services are operational
A-005	Network connectivity is available during transactions

Risks

ID	Risk	Impact
R-001	Payment gateway downtime	High
R-002	Loyalty service unavailability	Medium
R-003	Product service outage	High

R-004	Customer service outage	Medium
R-005	Network interruption during checkout	High

Business Requirements

BR ID	Business Requirement
BR-001	The system shall allow recovery of unfinished transactions before starting a new sale.
BR-002	The system shall authenticate store users before granting access to POS functionality.
BR-003	The system shall verify store readiness before allowing transactions to be processed.
BR-004	The system shall allow users to search for existing customers.
BR-005	The system shall allow users to create new customer records.
BR-006	The system shall support guest customer transactions without customer registration.
BR-007	The system shall allow users to search products using product name, SKU, or barcode scanning.
BR-008	The system shall allow products to be added to the shopping basket.
BR-009	The system shall support gift card validation and addition to the shopping basket.
BR-010	The system shall automatically update basket totals whenever basket contents are modified.
BR-011	The system shall support item-level and basket-level discounts.
BR-012	The system shall support loyalty voucher redemption during checkout.
BR-013	The system shall support staff discount validation and application.

BR-014	The system shall support multiple payment methods including cash, card, gift card, credit note, and other tenders.
BR-015	The system shall support optional gift receipt generation based on store configuration.
BR-016	The system shall save completed sales and customer orders.
BR-017	The system shall generate transaction receipts and confirmations after successful payment.
