

BRD - SkyRide Operations Management System

Domain: Travel & Tourism
Platform: Mobile Application
Users: Drivers, Operations Team
Methodology: Agile Scrum

1. BRD (BUSINESS REQUIREMENTS DOCUMENT)

Executive Summary

SkyRide Operations Management System is a mobile-based operational platform designed to support transportation personnel responsible for passenger pickup, onboarding, transportation, communication, trip tracking, and disruption management for aerial tourism experiences.

The system aims to streamline daily operations by providing drivers with real-time manifests, passenger information, trip status updates, payment visibility, communication tools, and weather disruption management capabilities.

The solution improves operational efficiency, reduces manual intervention, and enhances passenger experience throughout the journey lifecycle.

Business Objectives

ID	Objective
BO-001	Improve passenger onboarding process
BO-002	Reduce manual operational activities
BO-003	Improve trip visibility
BO-004	Improve passenger communication

BO-005	Streamline route management
BO-006	Improve disruption handling
BO-007	Increase operational efficiency
BO-008	Improve driver productivity

Business Requirements

BR ID	Requirement
BR-001	Driver shall authenticate using valid credentials
BR-002	Driver shall recover forgotten password
BR-003	Driver shall view operational dashboard
BR-004	Driver shall access assigned manifests
BR-005	Driver shall manage passenger assignments
BR-006	Driver shall manage passenger information
BR-007	Driver shall send passenger communications
BR-008	Driver shall view payment status
BR-009	Driver shall manage trip lifecycle
BR-010	Driver shall manage weather disruptions
BR-011	Driver shall view trip summary
BR-012	Driver shall track passenger boarding status
BR-013	Driver shall start and end trips
BR-014	Driver shall manage route execution
BR-015	Driver shall monitor operational status
